How to organize and format CDR data using CDRformat script:

1. In "[TMSCC/CDR format script](#)" you will find two zip files, containing the executable format of the CDRformating script. If your system runs the 32 bit version of windows, you may download and unzip *"CDRformat_Win32bit".* Users of 64 bit windows can download and unzip *"CDRformat".*

2. Assuming you unzip the file into a folder named *"…/CDRfomat",* now you need to save the text file of the CDR data in the same folder. (I attached two CDR files as examples, i.e. CDR_1.txt , CDR_2.txt)

3. Next, run the CDRfomat.exe (or CDRformat_Win32bit.exe). A command window will appear in which you need to type the name of the CDR file (for example CDR_1.txt). The script will run and outputs an excel file containing the organized CDR data. This output file is saved at the same folder (let's say *"…/CDRfomat/CDR_1.xlsx").*

It is possible to add other features and build up on this script. So you are more than welcome to give me any comments or ideas.
